

Addressing factors that impact learning

## Alexandra's situation

Alexandra is thirty years old.

Two years ago, she decided to go back to school. She was a beneficiary attendant in a hospital surgery unit. She was in regular contact with respiratory therapists. They took the time to explain what they were doing and why they were doing it. Alexandra was fascinated by their work and saw the possibility of holding this type of position.

Alexandra is studying in a college respiratory therapy program.

Next week, she will begin her third placement with you in rehabilitation care.

She provided you with some information about her professional and academic journey.

She has completed placements in pediatric, neonatal and cardiopulmonary care.

Her academic record is average.
